

### ABSTRACT OF THE DISCLOSURE

Provided are an apparatus and method of executing a multi-clipboard. In order to execute the multi-clipboard, it is determined whether a predetermined amount of time has passed after a paste is activated. Then data stored in a basic clipboard is pasted if a signal indicating a user's selection to paste is received before the predetermined amount of time has passed. If the predetermined amount of time has passed, data stored in a multi-clipboard is displayed. As such, it is possible to support a user-friendly multi-clipboard function based on a general clipboard without the need for additional software or hardware.
